

**CLOUDPROTECT**  
secure backup in the cloud

# CLOUDPROTECT BENEFITS

## BENEFITS OF CLOUDPROTECT

- Secure efficient transfer to/from cloud storage
- Delivers automation, analytics and optimisation to traditional IT operations
- Deduplication to the cloud
- Accelerate your data recovery
- Backup capabilities for all data types
- Data can be backed up directly to the cloud or via a local appliance without paying a license fee
- Same cost per GB for servers, laptops or desktops

## BUSINESS BENEFITS

- **Getting closer to the data** – You can easily invoke data recovery processes and have essential data returned overnight
- **Near real-time reporting** – Daily reports on incidents, anomalies, and any other data requests mean that problems can be instantly addressed, and the raw data can transform into rich business insights.
- **Failsafe disaster recovery** – In the rare cases of critical incidents, data can be recovered and a site can be operating again with rapid speed.
- **Improved data governance** – With accurate and comprehensive logs of all data, and all activities performed on that data, you can now comply with world-class data governance and audit standards.
- **Scalable and flexible** – As a cloud-based, generic data management application that can be modified to suit any needs, the CloudProtect solution is flexible enough to backup any form of data – irrespective of the size or nature of the data.
- **Single point of contact** – Through the Data Management Professionals South Africa local support team, you have the comfort of knowing that you have one trusted point of contact available for any requests. Getting closer to the data – You can easily invoke data recovery processes and have essential data returned overnight
